Email: argavthakur@gmail.com | Mobile: +91-7807111853 | Phagwara, Punjab

SUMMARY

Second-year B.Tech Computer Science Engineering student building full-stack web applications and embedded/hardware prototypes with Python, Django, JavaScript, and ESP32. Seeking software development internship opportunities.

SKILLS

- Languages: C, C++, Python, JavaScript (ES6), TypeScript
- Web & Frameworks: HTML5, CSS3, React, Django, REST APIs, DOM Manipulation
- Embedded/Hardware: ESP32, Embedded C, Sensor Integration, Motor Control
- Concepts: Data Structures & Algorithms (C++), File Handling, AI/ML Fundamentals
- Tools: Git, GitHub, VS Code, MS Excel, Canva
- Soft Skills: Problem Solving, Iterative Design, Attention to Detail, Time Management

PROJECTS

Hostelers Expense Manager

In Progress

- Architecting a full-stack expense-tracking platform in Django enabling hostel residents to log, split, and settle shared expenses within group accounts.
- Designing relational data models and Django ORM schemas to support multi-user expense splitting, balance calculation, and settlement history.
- Building a real-time dashboard with JavaScript-driven UI updates, surfacing per-user balances and group expense summaries for quick at-a-glance tracking.

Tech Stack: Python, Django, JavaScript, HTML5, CSS3

AI Automated Taxi Car

2025

- Engineered an ESP32-based autonomous prototype vehicle in Embedded C, combining real-time obstacle detection with route navigation logic.
- Integrated ultrasonic and IR sensor input (distance/proximity) with motor driver circuitry to translate obstacle readings into automated driving decisions.
- Iteratively tuned navigation and braking logic through repeated hardware test runs to improve collision avoidance and route-completion reliability.

Tech Stack: ESP32, Embedded C, Ultrasonic/IR Sensors, Motor Drivers

Dynamic Movie Search Application | GitHub

2025

- Built a movie search web app in vanilla JavaScript consuming the OMDb REST API to fetch and render real-time movie data in response to user queries.
- Implemented dynamic DOM rendering for search results — posters, ratings, and plot summaries — with graceful handling of empty/error states and malformed queries.

Tech Stack: HTML, JavaScript, OMDb REST API

Personal Expense Tracker (CLI) | GitHub

2024

- Developed a console-based Python application to log, categorize, and calculate daily expenses via a menu-driven interface.
- Implemented persistent file handling (File I/O) so expense history survives across sessions without a database dependency.

Tech Stack: Python, File I/O

CERTIFICATIONS & ACHIEVEMENTS

- Hackathon Participant — Buildstorm, organized by PlaytoUnite & QubicSquare Technologies Pvt. Ltd.
- Mastering Leadership Skills — Certified by UniAthena.
- Artificial Intelligence & Web Development Workshops — Participant.
- District-Level Volleyball Player — Winner, inter-district tournament.
- Languages: English (Intermediate), Hindi (Fluent)

EDUCATION

Lovely Professional University

B.Tech in Computer Science Engineering; CGPA: 8.07

Phagwara, Punjab

2025 – Present

DCM Gurukul Public School

Class XII, State Board (H.P.)

Himachal Pradesh, Chamba

2025

- Percentage: 86%
